

# Lecot delivers training in multiple languages with LMS365

“ We can now provide courses for all employees in a single platform

- L&D Responsible

## Why did Lecot searched for a new learning platform?

*In 2018, the company decided to take a more digital approach in learning and started their search for a suitable learning management system (LMS) to provide training for the employees of Lecot.*

## What were some of your requirements?

*As Lecot has employees with different native languages (Dutch/French), the learning platform and the courses needed to be available for all the employees in both languages. With this LMS, Lecot also wanted to make their current content available to their employees on a single, easy to use platform. Additional requirements were:*

1. Customizable portal available in Dutch and French
2. Dutch support
3. Link with Active Directory and Microsoft products
4. An appealing trainings dashboard where employees can follow up on their trainings

## How was the implementation process?

*After selecting their preferred vendor, LMS365, Lecot asked The Learning Hub (as an official partner of LMS365) for support with the implementation and configuration of the solution. Lecot's L&D responsible started creating a home page, the first courses were added to the portal and a personal certificate included – all with the support of The Learning Hub. At the end of the day, the first prototype of their own learning platform "Lecot Learning" was ready.*

## Can you share some of the results you have experienced since implementing LMS365?

*In June 2020, the first course of Lecot went live with some support of The Learning Hub. After this course and some extra testing, Lecot was ready for managing all their future courses in LMS365. Two years later, more than 120 courses were added, which resulted in total of 2900 course enrollments. Each employee can now also choose his preferred homepage by selecting the desired language on their SharePoint site.*
